

**Amendments to the Claims**

Claim 102 (new): A surgery system comprising:  
an elongate cylindrical member having an outer surface and an inner surface  
opposite the outer surface that defines a passage extending through the elongate  
cylindrical member through which instruments can be insert to a surgical location; and  
an expansion instrument configured to be passed through the passage in a  
folded configuration, and to be deployed at the surgical location into an expanded  
configuration.

Claim 103 (new): A cavity-retaining tool for bone surgery, comprising:  
a cavity-retaining sheath configured for insertion into body tissues to form a work  
space for bone surgery;  
a treatment channel formed within the cavity-retaining sheath to guide bone  
surgery tools into the work space; and  
a viewing element configured to be positioned within the treatment channel, and  
configured for observation of an operation field in the work space.
